

QUICK START GUIDE - Automate™ IFTTT

STEP 1

Download the IFTTT app on iOS or Android. Sign up for a free account

STEP 2

Enter your email and create a secure password

STEP 3

Select discover

STEP 4

Ensure you are on the services tab. Search "Automate Shades v2" and select it

Connect your services to IFTTT

STEP 5

Select Connect in the top right hand corner.

STEP 6

Enter your Automate Pulse app credentials.

STEP 7

Your Automate shades are now connected to IFTTT. Select the back button

STEP 8

Ensure you are on the services tab. Search "weather underground"

Connect your services to IFTTT

STEP 9

Select Connect in the top right hand corner.

STEP 10

Type and search your local location so weather based triggers are connected to your home location. Select Connect

STEP 11

Ensure you are on the services tab. Search "Location" Select Location

STEP 12

Select connect location

Creating Applets & IF Triggers

STEP 11

Proceed to connect as many 3rd party services as you need. Select Services tab to see all your services

STEP 12

Applets are just another word for Triggers. IF one thing happens then the other trigger will occur

STEP 13

Select "my applets" Select the + to create a new Applet

STEP 14

Select the Blue +this to create the first trigger

STEP 15

Search "Weather" Select Weather Underground service

STEP 16

Choose from a range of weather based services

STEP 17

Scroll further down to select "sunrise"

STEP 18

Select the Blue + THAT to create the first trigger

STEP 19

Search and select "automate"

STEP 20

Choose what you want to control from the Pulse app; a single device, scene or a room

STEP 21

Select Scene to control multiple device for sunrise

STEP 22

IFTTT will find all the Scenes in your Pulse app. Select the drop down arrow and find the scene.

STEP 23

Select a scene already setup in pulse that will raise shades during sunrise. Select Create action

STEP 24

A summary of the trigger will appear. Select finish to finalise the Applet

Repeat these steps and create as many applets you require

Example of Applet Triggers:

- Close shades at Sunset
- Close shades if above x Degrees
- Open shade if UV index rises above X

IFTTT brings all your IoT devices and apps together, here are some other commands that work with compatible apps and devices:

- If I turn on light; close my shade
- If the temperature rises close my shades
- If there is strong wind warning close my awning
- If there is rain forecast close my awnings

STEP 25

Select "my applets"
Select the + to create a new Applet

STEP 26

Select the Blue IF + to create the first trigger

STEP 27

Type "location" and select location service

STEP 28

Choose "you exit an area"

STEP 29

Locate the area you want the trigger to occur when you exit

STEP 30

Select the Map and zoom in or out to select the location

STEP 31

Confirm Trigger

STEP 32

Select the Blue + THAT to create the first trigger

STEP 33

Search and select "automate"

STEP 34

Choose what you want to control from the Pulse app; a single device, scene or a room

STEP 35

Select Scene to control multiple devices to move when you exit set area

STEP 36

A summary of the trigger will appear. Select finish to finalize the Applet
